

# DC Power Supply

## Quick Guide

### Set Up:

1. Plug in and turn on using power button
2. Decide which channel you will be using and use the channel selectors to switch to that channel.
3. Make sure the center buttons are set to independent.
4. Use the current and voltage dials to adjust to your desired voltage and current.

### Use:

1. Connect the positive and negative leads to their respective locations on your circuit.
2. When you're ready, push the OUTPUT button to start the power supply.

### Clean Up:

1. Turn off output before unplugging from your circuit.
2. Make sure to turn off both the output and the main power.
3. Reset the dials to 0V and 0A.
